SMART-CAL 360

SMART-CAL 360 takes calibrating SENSIT® instruments to the next level.

In addition to logging calibration data, time, date, sensor and pump performance, SMART-CAL 360 pushes firmware updates to selected SENSIT instruments without the need to return the instrument to the factory. SMART-CAL 360 tracks sensor life, and gives an early warning when it's time to replace calibration bottles.

Improved data management software provides automatic data transfer for compliance reports and notifications of overdue or failed calibrations. Logs can be viewed on the large touchscreen display or reports via emailed spreadsheet or pdf. SMART-CAL 360 communicates over LAN and Wi-Fi, so that the station can be positioned where it is most convenient and accessible, and it works with any SMART-CAL compatible instrument.
